

Fly Control Built by Science

RATE CARD

THE HORN FLY IS ONE OF NORTH AMERICA'S MOST PERSVASIVE AND COSTLY EXTERNAL CATTLE PARASITES

To prevent horn fly emergence, please refer to the chart on the opposite side to determine the proper amount of Altosid® IGR you should include in your feed.

INCLUSION RATE TABLE FOR ALTOSID® IGR 0.4% PREMIX

FACTOR	CWT	FEED RATE (lbs./day)	ALTOSID® IGR (lbs./ton)
1.25	3	3	1.25
1.25	4	0.25	20
1.25	4	4	1.25
1.25	4	8	0.625
1.25	5	0.25	25
1.25	5	5	1.25
1.25	5	10	0.625
1.25	6	0.25	30
1.25	6	12	0.625
1.25	7	14	0.625
1.25	8	16	0.625
1.25	10	0.25	50
1.25	11	0.25	55
1.25	12	0.25	60
1.25	13	0.25	65
1.25	14	10	1.75
1.25	14	20	0.875
1.25	14	30	0.6
1.25	14	40	0.45

To determine the proper amount of Altosid® IGR per ton of feed to prevent horn fly emergence, multiply the factor by the CWT and divide by the feed rate.

EXAMPLE:

Pounds of Altosid® IGR 0.4% Premix needed in a ton of feed to prevent horn flies on a 1,200 lb. animal consuming 4 oz. of mineral per day.

$$\frac{1.25 \times 12 \text{ CWT}}{0.25 \text{ lbs. of feed per day per animal}} = 60 \text{ lbs. of Altosid® IGR 0.4\% Premix per ton of feed}$$
