

2025
90-DAY TRIAL
BY THE NUMBERS

Improved Fly Control in 90 Days

**Strong Fly Control Starts
with Central Life Sciences**

The 2025 fly control demo program brought together 183 producers from 27 states to evaluate feed-through fly control for the first time at their respective locations. Across 72,000 head of cattle and a wide range of operations, the results showed consistent improvements, such as decreased fly pressure, less bunching, and improved herd comfort. Bottom line, producers expressed a high level of satisfaction with using feed through fly control.

2025

TRIAL SNAPSHOT

72,000

cattle tested

183

producers involved

27

states represented

Product Usage

53% ClariFly® Larvicide

47% Altosid® IGR

Results at a Glance

87.4% of producers saw overall fly control improvement during the trial

Behavior & Herd Comfort

68.4%

observed less bunching

84.0%

noticed cattle appeared less stressed

90.9%

reported a visible reduction in fly populations

Producer Satisfaction

8.3/10

average satisfaction score

94.7%

plan to continue using feed-through fly control

>85%

producers reported strong performance across all operations

One Clear Takeaway

Producers across the country confirmed that consistent intake, paired with science-backed solutions, leads to reliable fly control and improved herd comfort. The 2025 trial proves that strong performance is achievable across a wide variety of real-world environments.
